

QUALITY CONTROL SYSTEM / ARTIFICIAL VISION WITH DEEP LEARNING TECHNOLOGY

Designed for the **complete inspection of packaging and its contents**, it is the perfect ally for quality control in products such as pizzas, tortillas, sliced products, meats, fish, etc.

Image processing capacity to inspect products at **high speeds**.

The most notable feature is our **ROSEPETAL AI Platform** for product inspection.

Its **versatility** is reflected in its ability to adapt to any production line, even in mechanically constrained spaces.

The **integrated rejection system** with one or two containers to separate defect types.

Application sectors:

Food industry

Key features:

- Simplicity in creating new formats.
- User-friendly interface.
- Solid structure made of stainless steel.
- Customized lighting.
- High-resolution cameras.
- Optional traceability software.
- Sealing verification around the entire perimeter.
- Batch and barcode verification.
- Verification of the upper film reference.

Common detections:

Deformation

Bubbles in the heat-sealing

Barcode

Abnormal object

Partial batch

Broken bottom
